Title: Novel touch screens for hand - held devices

Author(s): Gillespie, D.

Author Affiliation: Synaptics Inc., San Jose, CA, USA

Journal: Information Display vol.18, no.2 p.22-5

Publisher: Palisades Inst. Res. Services,

Publication Date: Feb. 2002 Country of Publication: USA

CODEN: INFEDAB ISSN: 0362-0972

Language: English Document Type: Journal Paper (JP)

Treatment: Applications (A); Practical (P)

Abstract: Until now, **hand - held devices** have been neatly categorized into telephones, pagers, **personal digital assistants (PDAs)**, and so on. Each category was relatively simple and well-defined, and each called for a simple input device - telephones had **keypads**, pagers had a few buttons, and **PDAs** had touch screens for handwriting and **selection**. Today, all these **products** are growing more complex: telephones have intricate menu systems, pagers offer messaging input, and **PDAs** are evolving into full-fledged computers with **Internet connectivity**. The categories are also converging, which may require designers to rethink their human interfaces. A device incorporating both telephone and **PDA** functions, for example, may not have space for both a **keypad** and a touch screen - which would require their functions to be combined in a single input device. We believe that simplicity and convenience, as well as functionality, in the human interface will become powerful product differentiators. We also believe that the evolution and convergence of **hand - held devices** are driving advances in the human interface, and that many of these advances hinge upon the touch screen.

Title: Implementing a wireless data-enabled handheld PC optimized for size, battery life, and functionality

Author(s): Oliverio, G.

Conference Title: Proceedings of the Fourth Annual Portable by Design Conference p.212-18

Publisher: Penton Publishing, Hasbrouck Heights, NJ, USA

Publication Date: 1997 Country of Publication: USA 486 pp.

Material Identity Number: XX97-00821

Conference Title: Proceedings of Portable by Design

Conference Sponsor: Electronic Design

Conference Date: 24-27 March 1997 Conference Location: Santa Clara, CA, USA

Language: English Document Type: Conference Paper (PA)

Treatment: Practical (P)

Abstract: Most users of **information products** are observing an onslaught of very clever low cost, portable computing devices that have

excellent connectivity to the desktop. Examples in this second generation of devices formerly referred to as " PDA 's" include the US Robotics' Pilot and handheld PCs from Casio, Philips, NEC, Hitachi and others which run Microsoft's Windows CE operating system. Meanwhile, users of communications devices now are receiving data services on their **alphanumeric** pagers such as news reports and e-mail forwarding. An obvious next step in the handheld PC and organizer market will be the incorporation of low cost wireless to extend their functionality even further. Of all of the technologies available to achieve this wireless functionality, only one technology can achieve a competitive price point: data **transmission** over the one-way paging **networks** . Paging is not often thought of as a wireless data network, but the ubiquity of paging signals and the intrinsic reliability of the FLEX/sup TM/ protocol make for a perfect match for low-cost wireless data. This paper describes the implementation of incremental hardware and software required to give a **handheld PC device wireless** connectivity. The key criteria in this effort are optimizing battery life, size, and cost. It also addresses some practical issues that need to be addressed such as delivering a true application that fits the user's needs, and the distribution method for such a subscriber device. (0 Refs)

Product Name: Rex 6000 MicroPDA

Languages: English

Document Type: Hardware Review

Grade (of Product Reviewed): B

Geographic Location: United States

Presents a favorable review of the Rex 6000 MicroPDA (\$149), a hand-held **personal digital assistant (PDA)** from Xircom of Thousand Oaks, CA (805). Explains that its touch-screen bolsters ease of use. Highlights its Web clipping capabilities, PCMCIA card form factor for extreme portability, 2MB of RAM, 240 by 120 pixel display resolution, onscreen **keyboard** for text entry, Intellisync software from Pumatech Inc. to manage installation and synchronization, and replaceable lithium-ion batteries. Mentions, however, that it is compatible only with Windows 2000/98 and lacks **Internet connectivity** , multimedia features, or peripheral expansion. Concludes that it is a solid **product** for basic personal **information** management (PIM) functions. Includes a photo. (MEM)

At Comdex, Wireless is the center of hopes
US: DELL PREDICTS STRONG DEMAND FOR WIRELESS
Wall Street Journal Europe (WSJ) 15 Nov 2000 p.24
Language: ENGLISH

Speaking at the Comdex trade show, Michael Dell, the chairman of Dell Computer, is predicting that **wireless** will form the "future of our industry", and expects that there will be a very strong demand for **laptop** computers that can communicate at high speeds without telephone **connections** or other wired- **networks**. Amongst other **products** on **display** were tablet-style systems that use touch screens or pen-type input devices instead of **keyboards**, such as National Semiconductor's tablet-style system called Geode WebPAD Metro, which offers wireless data-transmission capabilities in a number of US cities at speeds twice those of most phone modems. Another growing trend is for companies to add Internet capabilities to cellphones and cellular capability to **hand - held computers**, as demonstrated by Nokia and Motorola.

Motorola and Three Partners Launch e-Commerce Venture
US: NEW JOINT VENTURE FOR MOTOROLA
Wall Street Journal Europe (WSJ) 16 Jun 2000 p.26
Language: ENGLISH

Motorola is to get together with three other companies, Symbol Technologies, Connect Things and AirClic in order to form a joint venture that focuses on **cellular phones** and scanners for use in e-commerce. The deal will see an investment of US\$ 500mn but as yet it has not been revealed exactly how much each company is providing. The plan is to link up AirClic and its scanning devices to Symbol's **bar - code** technology and the systems infrastructure of **cell - phone** maker, Motorola. Tiny scanners will be placed into **cell phones** and Palm-type organisers and create web codes that can be placed into **bar codes** on product and print ads. The idea is that consumers who liked the products could scan them, get directly **connected** to the appropriate **Web sites** and order like **products** and gather more **information** about them. Investment is to come from AirClic investors - part of the Goldman Sachs Group, Edgewater Private Equity Funds and others, such as individual, vice chairman of Spencer Stuart & Associates, David Carey.

NOVELTY - A **barcode** scanner (21) connected to a **mobile
telephone** (20), scans a **barcode** (11) for **identifying** the **product**
to be ordered. The mobile telephone has a processor programmed to
operate a wireless applications protocol (WAP) client, send connection
less short messages or voice and dial tones received from the scanner.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
following:

(a) A mobile commerce system;

(b) A printed medium carrying a barcode suitable for use with the
mobile commerce terminal

USE - For ordering goods, downloaded products such as MP3 music
file, services such as car wash and for obtaining information through
Internet.

ADVANTAGE - Enables the user to place an order easily by using the
barcode scanner.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
the mobile commerce system.

US 20020161658	A1	11	G06F-017/60	

Abstract (Basic): US 20020161658 A1

NOVELTY - A wireless barcode scanner is provided with a data system for receiving product ID data such as UPC representing a **product selected** by a consumer for inquiry, from a merchant's computer system memory through LAN **connected to Internet**. The information associated with the identifier is then transmitted to display unit.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Shopping list creation system; and
- (2) Shopping list item barcode scanning system.

USE - For creating shopping list to shop in retail/grocery stores, mail order/telephone order (MOTO), or for online shopping through PDA, PC, cellular phone, or Internet appliance.

ADVANTAGE - Enables reliable creation of shopping list without the possibility of scanning duplicate UPCs. Allows consumer to take the wireless barcode scanner on a shopping expedition, simply reference the shopping list without having to access a base station. Hence provides satisfactory shopping experience.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic of the shopping process by the side of the consumer.

Abstract (Basic): WO 200299708 A1

NOVELTY - Includes a remote ordering/payment apparatus, a barcode scanner to scan objects e.g. picked up from **display items** in retailer outlet or depicted in catalog, and a memory to record the data of an object scanned and to produce a list of objects scanned. Desired objects are chosen from the list to form a desired list of objects which is sent to an order center e.g. via mobile telephone connection.

DETAILED DESCRIPTION - A controller located at the order center receives the transmitted desired list and transmits appropriate billing data to the remote ordering/payment apparatus.

An INDEPENDENT CLAIM is also included for A method of remotely ordering retail products by means of registering the user details.

USE - For home shopping.

ADVANTAGE - User need not be physically **connected** to e.g. **Internet** during browsing process and browsing process need not be time consuming or act as disincentive.

DESCRIPTION OF DRAWING(S) - The drawing shows a schematic diagram of the system.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a vibrator motor holder for **wireless telephone** vibrator motors.

SOLUTION: The holder is integrally formed on the I/O connector of a telephone. The holder comprises a device insertion cavity 3 adapted to receive a vibrator motor. The inner walls of the cavity 3 are dimensioned, so as to correspond with the inserted vibrator motor, and thereby a snug fit is ensured, when the motor is contained therein. A locking piece 6 is provided which is movable across an entry port 5 of the cavity. The obstruction of a portion of the entry port by the locking piece 6 is sufficient to contain the motor within the cavity 3.

Abstract (Basic): EP 1274139 A2

NOVELTY - A battery pack comprises two cells (11) in a housing, and a metal strap (13) electrically connecting the cells. The first cell has a radius and a periphery. The strap has an end disposed over the first cell and a portion of the periphery. The distance between the strap end and the overlapped portion of the periphery is greater than the first cell radius.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

(a) a cordless system comprising a power tool, and the battery pack; and

(b) a method of manufacturing the battery pack by welding the strap between the two cells, and disposing the cell in the housing.

At least one cell has a weld area (11W).

USE - For use with electric and/or electronic devices, e.g. power tools, chargers, and **cellular telephones**.

ADVANTAGE - The invention has a decreased fatigue wear on strap, thus increasing battery life.

DESCRIPTION OF DRAWING(S) - The figure shows a perspective view of the welding process.

Abstract (Basic): US 20020118521 A1

NOVELTY - A chassis has a conductive floor for supporting sub-circuits. A lid (204a) positioned within the chassis, has a side wall (218a) extending and surrounding a sub-circuit to electrically isolate the sub-circuit from other amplifier sub-circuits.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Amplifier sub-circuit isolation method; and
- (2) Amplifier fabrication method.

USE - For radio frequency (RF) transmission system such as **cellular telephone** base station and other communication system.

ADVANTAGE - Provides unique isolation scheme in a compact, non-complex and low cost package, by the provision of amplifier chassis and lid structure design.

DESCRIPTION OF DRAWING(S) - The figure shows a perspective view of the bottom side of the lid structure.

AU 200225853 A G06F-017/30 Based on patent WO 200242946

Abstract (Basic): WO 200242946 A2

NOVELTY - Device is a **PDA , laptop , handheld computer , palmtop or cellular phone** and has a bar code scanner or alphanumeric keyboard for input of product ID information, accesses a product information source, retrieves the information and indicates a purchase decision to the user by a green or circular positive, red

octagonal negative or yellow triangular caution indicating button.

USE - Device is e.g. a **PDA** using the Internet to make product purchase decisions.

ADVANTAGE - Device is handheld and has barcode scanning and reading capabilities.

DESCRIPTION OF DRAWING(S) - The figure shows a **cellular phone** with product purchase functions.

Abstract (Basic): WO 200202001 A

NOVELTY - A **hand - held device** comprises light emitting diode
(203) for illuminating an area of an epithelial surface; detector (213)
to convert the intensity of remitted light into an electrical signal;
processor (205) to analyze the difference in intensity of the
chromophores across a lesion; and display (207) for an output from the
processor.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a
method of interpreting the distribution of chromophores within a lesion
of an epithelial tissue comprising:

(1) illuminating the epithelial surface with a wavelength of light

corresponding to a chromophore;

(2) detecting the intensity of light remitted from the skin surface to form a data set;

(3) determining the variation in intensity of the remitted light across the lesion; and

(4) providing an output corresponding to the significance of the variation in the concentration of the chromophore across the lesion.

USE - For the determination of the concentration and distribution of chromophores within an epithelial surface.

ADVANTAGE - The device of the invention is portable. It is of a convenient size and shape to access epithelial tissue areas of varying geometry, e.g., nose bridge, ear surfaces.

DESCRIPTION OF DRAWING(S) - The figure shows a sectional view of the device.

Abstract (Basic): US 6254416 B1

NOVELTY - The electrical device (8) is inserted into the insertion cavity (3) through the entry port (5). The contact edge of a lock mechanism (6) extends to engage the rear edge of the device, which is movable within a channel. The channel is extended to twice the length the contact edge of the lock mechanism so as to obstruct a portion of

the entry port, while contacting the rear edge of electrical device such that the device is held with the stopper (35) within the cavity.

DETAILED DESCRIPTION - The device insertion cavity has side walls (4) and a stopper extended into the cavity whose inner face walls have a cross section corresponding to exterior surface cross section of the device to be accommodated. An INDEPENDENT CLAIM is also included for electrical connector.

USE - For accommodating vibration motor in **wireless telephone**.

ADVANTAGE - Securely retains the electrical device within a retained position, such that any vibration of the electrical device that is a vibration motor within its housing is transmitted efficiently to the telephone.

DESCRIPTION OF DRAWING(S) - The figure shows the perspective view of electrical connector within a housing.

Cavity (3)

Side walls (4)

Abstract (Basic): WO 200137086 A2

NOVELTY - The system includes several cells residing on a **computer**-implemented system, each **cell** having a domain of execution and at least one processing element. A separation specification governs communication between the processing elements. A kernel of an operating system facilitates execution of the processing elements and administers the communication between the processing elements in accordance with the separation specification, such that one processing element can influence the operation of another processing element only as set forth by the separation specification.

The domain of execution is further defined as a memory space accessible to the kernel and each processing element is further defined as a task, such that the task includes several programmable machine instructions that are executable by the operating system.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for a method of allocating memory for a task in a computer-implemented system and for a method for performing a remote procedure call from a source task residing in a source cell to a target task in a target cell.

USE - For using separation principle to design a kernel of an operating system.

ADVANTAGE - Provides high-grade separation between processing elements in a system. High grade separation permits system designer to establish high assurance secure systems by allowing each processing element to be analyzed in isolation.

DESCRIPTION OF DRAWING(S) - The figure shows a separation kernel that supports a high degree of separation between processing elements in a computer-implemented system.

JP 3355405	B2		4	H01R-024/10	Previous Publ. patent JP 2000315554

Abstract (Basic): US 6062885 A

NOVELTY - Switch contact (22) with base (32) is formed from stamped metal sheet are mounted in housing (12). An integral U-shaped spring contact arm (34) over the base (32), has distal end (36) with contact surface (40) facing away from the base. Switch contact (24) has contact surface (30) facing the base (32) and in opposing engagement with contact surface (40), which is offset to one side of contact arm.

DETAILED DESCRIPTION - Movement of the spring contact arm towards the base (32) causes the contact surface (40) to move away from the contact surface (30). Rounded actuation portion is provided near the distal end of the spring contact arm.

USE - For stereo audio and video equipments, **mobile phone computer** and other portable equipments.

ADVANTAGE - Since the spring contact arm has a rounded actuation portion near the distal end and projecting them along direction away from the base, the rounded actuation portion facilitates restraining a component such as stereo plug in the switch assembly. The folded back distal end of the spring contact arm has an undersurface engaging the base and providing anti-overstress provision for the spring contact arm.

DESCRIPTION OF DRAWING(S) - The figure shows section through a housing which mount the switch assembly with switch opened by the insertion of stereo plug.

Housing (12)
Switch contact (24)
Contact surfaces (30,40)
Base (32)
Distal end (36)
pp; 5 DwgNo 2/4

...anywhere, anytime," stated Juan Santiago,
Business Development Manager at Motorola.

Using unique barcode numbers to **identify** and reference **items**,
BarPoint's
mobile e-commerce service returns precise, product specific search results.
Other shopping and **product information** services use generic Boolean
searches,
forcing consumers to drill down through unwanted information, making the
search more difficult and time consuming, especially with the limited
screen
size and numeric **keypad** of a **mobile phone**. Not only does BarPoint
reduce
Internet connection time, it also increases the ease of entering and
obtaining **product information** by using barcode numbers instead of
keywords.
Motorola mobile phone users will be able to...

...a long distance phone number. Entering the barcode number returns a
wealth of product-specific **information**, including detailed **product**
specifications, manufacturer contact **information**, competitive pricing
from
various sources, product reviews, and links that provide online purchasing
capabilities.
"BarPoint.com already offers consumers unbiased **product information**,
empowering them to make informed decisions wherever they are, whether at
their desktop or in...
